**INDEPENDENT AUDITORS' REVIEW REPORT
TO THE BOARD OF DIRECTORS OF ARAB AFRICAN INTERNATIONAL BANK (S.A.E.)
ON THE REVIEW OF INTERIM SEPARATE FINANCIAL STATEMENTS**

Introduction

We have performed a limited review on the accompanying interim separate financial statements of the Arab African International Bank - S.A.E. - ("the Bank") which comprised interim separate statement of financial position as at 30 June 2024 and the related interim separate statements of profit or loss, comprehensive income for the three-month and six-month periods then ended, and related interim separate statements of changes in equity and cash flows for the six-month period then ended and a summary of the significant accounting policies and other explanatory notes. Management is responsible for the preparation and fair presentation of these separate interim financial statements in accordance with the basis of recognition and measurement in accordance with the Central Bank of Egypt's rules issued on 16 December 2008 and as amended by the regulations issued on 26 February 2019 and the prevailing Egyptian laws. Our responsibility is to express a conclusion on these separate interim financial statements based on our limited review.

Scope of review

We conducted our limited review in accordance with Egyptian Standard on review engagements (2410). "Limited Review of interim financial statements performed by the Independent Auditor of the Entity". A limited review of separate interim financial statements consists of making inquiries, primarily of persons responsible for financial and accounting matters in the bank and applying analytical and other limited review procedures. A limited review is substantially less in scope than an audit conducted in accordance with Egyptian Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion on these separate interim financial statements.

Conclusion

Based on our limited review, nothing has come to our attention that causes us to believe that the accompanying interim separate financial statements do not presented fairly in all material respects, the separate financial position of the Bank as at 30 June 2024 and its separate financial performance for the three-month and six-month periods then ended and its separate cash flows for the six-month period then ended, in accordance with the basis of recognition and measurement issued by the Central Bank of Egypt on 16 December 2008, and as amended by the regulations issued on 26 February 2019 and the prevailing Egyptian laws.

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

1. General Information

Arab African International Bank was established as an Egyptian Joint Stock Company by special law no. 45 for the year 1964 in the Arab Republic of Egypt. Its registered Head office is at 5 Midan Al-Saray Al Koubra, Garden City, Cairo. The bank is not listed in the Egyptian stock market.

Arab African International Bank (Egyptian joint stock Company) provides retail, corporate banking and investment banking services in Its Head office and a network of branches in the Arab Republic of Egypt (96 branches & units), (2 branches) in United Arab Emirates, and (1 branch) in Lebanon. The bank has more than 3,132 employees available at the balance sheet date.

These financial statements were approved by the Board of Directors in the 28th of August 2024.

2. Summary of significant accounting policies

The principal accounting policies applied in the preparation of these financial statements are set out below. These policies have been consistently applied to the period presented, unless otherwise stated.

A. Basis of preparation

The separate financial statements have been prepared conforming with the Egyptian financial reporting standards and its amendments in compliance with the Central Bank of Egypt regulations and as approved by the Board of Directors on December 16, 2008.

In addition to the Egyptian Financial Reporting Standards, the International Financial Reporting Standard no (9) issued on Feb 26, 2019 is applied as per the instructions of the Central Bank of Egypt

B. Classification of financial assets and financial liabilities

At initial recognition, financial assets are classified and measured according to amortized cost, fair value through other comprehensive income (FVTOCI) and fair value through profit or loss (FVTPL). The financial assets are classified according to how they are managed (the Bank's business model) and their contractual cash flow characteristics.

B/1 Financial assets are measured at amortized cost if the following two conditions are met :

- The management intended to maintain the asset to collect contractual cashflows and;
- This contractual condition of financial assets will build cashflows in certain dates which are Solely Payments of Principle and Interest (SPPI).

B/2 Debt instruments have been measured at fair value through other comprehensive income "FVTOCI" if it is not measured at fair value through profit or loss and the following two conditions are met:

- The management intended to maintain the asset to collect contractual cash flow and/or sale of the financial asset;

B/3 Financial assets are measured at fair value through profit and loss "FVTPL" if the following condition is met:

- The management intended to maintain the asset within a business model that do not aim neither to hold the asset nor to collect its contractual cashflows.

Upon initial recognition of equity investments that are not held for trading, the Bank may choose irrevocably to present changes in fair value in other comprehensive income.

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

All other financial assets will be classified as fair value through profit or loss.

In addition to that, at initial recognition, the bank may choose irrevocably to measure a financial asset that satisfies the measurement conditions of amortized cost or fair value through profit or loss (FVTPL) at fair value through other comprehensive income (FVTOCI) or fair value through profit or loss (FVTPL).

At initial recognition of investment in securities that are not held for trading, the bank may choose irrevocably to measure the subsequent changes in securities fair value through Other comprehensive income statement. All other financial assets are classified at fair value through profit or loss (FVTPL)

Business model assessment

The Bank assesses the objective of a business model in which a financial asset is held at the portfolio level because this reflects the best way the business is managed and information is presented to management. The information considered includes:

- The stated policies and objectives for the portfolio and the operation of those policies in practice, specially to know whether these management policies concentrate to gain the contractual interest or reconcile financial assets with financial liabilities which finances these assets or target cash flow from selling the assets;
- How the performance of the portfolio is evaluated and reported to the Bank's management;
- The risks affecting the performance of the business model and the financial assets held within that business model and how these risks are managed;
- The frequency, volume and timing of sales in prior periods, the reasons for such sales and its expectations about future sales activity. Moreover, the bank doesn't focus only on information related to sales activity separately, but also takes into consideration an overall assessment on how achieving the goal that was announced by the bank to manage financial assets and how to achieve cash flow.

Financial assets that are held for trading and whose performance is evaluated on a fair value basis are measured at fair value through profit or loss because they are neither held to collect contractual cash flows nor held both to collect contractual cash flows and or sell the financial assets.

Assessment of whether contractual cash flows are solely payments of principal and interest (SPPI TEST).

For the purposes of this assessment, "principal" is defined as the fair value of the financial asset at initial recognition. 'Interest' is defined as a consideration for the time value of money and for the credit risk associated with the principal amount outstanding during a particular period of time and for other basic lending risks and costs (e.g. liquidity risk and administrative costs), as well as profit margin.

In assessing whether the contractual cashflows are solely payments of principal and interest, the bank considers the contractual terms of the instrument. This includes assessing whether the financial asset contains a contractual term that could change the timing or amount of contractual cashflows such that it would not meet this condition.

Impairment of financial assets

According to Central Bank of Egypt (CBE) instructions dated February 26, 2019, IFRS9 to replace impairment loss model recognized according to previous instructions dated December 16, 2008, with expected credit loss (ECL). Expected credit loss is also applied on all financial assets in addition to some financial guarantees and loan commitments.

According to IFRS 9; impairment losses will be recognized earlier than when applying impairment losses according to Central Bank of Egypt (CBE) instructions dated December 16, 2008.

The Bank applies three stages to measure expected credit losses on financial assets that are recognized at amortized cost and debt instruments that are recognized at fair value through other comprehensive

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

income. The financial assets can transfer between these three stages according to changes in credit quality since initial recognition.

Stage 1: 12 months Expected Credit Loss:

It includes financial assets on initial recognition, financial assets that did not have any significant increase in credit risk since initial recognition, or those that have low credit risk. For these assets, expected credit loss is recognized on the gross carrying amount of the asset based on the expected credit losses that result from default events that are possible within 12 months after the reporting date.

Stage 2: Lifetime Expected Credit Loss - not credit impaired:

It includes financial assets that have a significant increase in credit risk since initial recognition but do not have objective evidence of impairment. Lifetime expected credit losses are recognized for these assets, while interest is still calculated on the gross carrying amount of the asset. Lifetime expected credit loss is the expected credit loss that results from all possible default events over the expected life of the financial instrument.

Stage 3: Lifetime Expected Credit Loss - credit impaired

It includes financial assets that have an objective evidence of impairment at the reporting date. For these assets, lifetime expected credit loss is recognized and interest is marginalized and recorded as Off-Balance sheet item.

C. Subsidiaries and associates

C/1 Subsidiaries

Subsidiaries are all entities where the bank has direct or indirect power to govern its financial & operating policies, generally accompanied by shareholding more than half of the voting rights. However, in individual cases, the bank may still exercise control with less than 50% shareholding, or may not be able to exercise control even with ownership over 50%. The existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing whether the bank has the power to control the entity.

C/2 Associates

Associates are all entities over which the bank has direct or indirect significant influence but not control over the entity, generally accompanying a shareholding of between 20% and 50% of the voting rights.

Purchase method of accounting has been applied to all the acquisition operations. The cost of acquisition is measured at fair value or through the assets offered and/or equity securities issued and/or liabilities incurred and/or liabilities accepted on behalf of the acquired company, at the date of the exchange, plus costs directly attributed to the acquisition. Identifiable assets acquired, and liabilities and contingent liabilities assumed in a business combination are measured initially at fair values at the acquisition date, irrespective of the extent of any minority interest. The excess of acquisition cost over the fair value of the bank's share of the identifiable net assets acquired is recorded as Goodwill. If the cost of acquisition is less than the fair value of the net assets of the entity acquired, the difference is recognized directly in the income statement into other operating income (expenses).

In the separate financial statements, the investments in subsidiaries and associates are subsequently accounted for using the cost method on the separate financial statements. According to the cost method; investments are recognized at acquisition cost plus any goodwill or less any impairment losses in value-if any-. Dividends are recognized as revenue in the separate income statement when they are declared and the bank's right to collect them has been established.

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

D. Segment reporting

An operating segment is a group of assets and operations providing products or services whose risks and benefits are different from those associated with products or services provided by other operating segments.

A geographical segment provides products or services within a specific economic environment characterized by risks and benefits different from those related to other geographical segments operating in a different economic environment.

Foreign currency translation

D/1 Transactions in foreign currencies

The bank maintains its accounts in US dollar. Foreign currency transactions are translated using the exchange rates prevailing at the date of the transactions. All monetary assets and liabilities balances in foreign currencies at the balance sheet date are translated at the exchange rates prevailing at that date. Foreign exchange gains and losses resulting from the settlement of such transactions are recognized in the following items in the income statement:-

- Net trading income for trading assets and liabilities or net income from financial instruments classified at initial recognition as fair value through profit or loss, and for assets/liabilities classified at initial recognition as fair value through profit or loss are recognized according to its type.
- Other Operating income (expense) for the rest of items.
- Changes in the fair value of monetary instruments denominated in foreign currencies classified as available for sale investments (debt instruments) are analyzed between translation differences arising from changes in amortized cost of the instrument and differences arising from changes in exchange rates prevailing and differences arising from changes in the fair value of the instrument. In the income statement, the difference in valuation related to the changes in amortized cost is recognized with the income of loans and similar income and with differences in exchange rate in other operating income (expenses). The difference in fair value is recognized in equity (Fair value reserve / financial investments available for sale).
- Translation differences on non-monetary items, such as equities held at fair value through profit or loss, are reported as part of the fair value gain or loss. Translation differences on non-monetary items, such as equities classified as available for sale financial assets, are included in the fair value reserve in equity.

D/2 Foreign branches

The bank translates results of business and financial position of foreign branches to presentation currency (if they don't operate in an accelerating inflation economy) in which the functional currency is different from the presentation currency of the bank as follows:

Translation of assets and liabilities at each financial statement presented to the foreign branch using the closing price on the date of this financial statement.

Translation of income & expenditure in each income statement is presented using the average exchange rates, unless the average doesn't represent an acceptable approximation of the cumulative effect of the rates applicable at the date of transactions, then the translation of income & expenditure will be by using exchange rate at the transaction date.

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

Recognition of the resulting currency differences in a separate item (foreign exchange transaction differences) in equity. Foreign exchange resulting from the assessment of net investment in foreign branches, loans and financial instruments in foreign currency to cover the investment with the same item are also transferred to equity. These difference are recognized in the income statement upon disposal of foreign branches as the part of other operating income (expense).

E. Financial assets

Financial assets classified as: Amortized cost, Fair value through other comprehensive income (FVTOCI) or Fair value through profit or loss (FVTPL). The classification depends on the business model that manages the financial assets and its contractual cash flow

E/1 Financial assets classified as amortized cost

The financial asset is retained in the business model of financial assets held to collect contractual cash flow.

- The objective from this business model is to collect contractual cash flow which represented in principal and interest.
- The sale is an exceptional event for this model and under the terms of the standard represented in following:
- Significant deterioration for the issuer of financial instrument;
- Lowest sales in terms of rotation and value;
- A clear and reliable documentation process to be done to justify each sale and its conformity with the requirements of the standard.

E/2 Financial assets classified as fair value through other comprehensive income

The financial asset is retained in the business model of financial assets held to collect contractual cash flows and sale to achieve the objective of the model.

Sales are high in terms of turnover and value as compared to the business model retained for the collection of contractual cashflows.

E/3 Financial assets classified as fair value through profit or loss

The financial asset is held in other business models including trading, management of financial assets at fair value, maximization of cashflows through sale.

The objective of the business model is not to maintain the financial asset for the redemption of principle or redemption of contractual cashflows and sale. Collecting contractual cash flows is an incidental event for the objective of the model.

The characteristics of the business model are as follows:

- Structuring a set of activities designed to extract specific outputs;
- Represents a complete framework for a specific activity (inputs - activities - outputs);
- One business model can include sub-business models.

F. Offsetting of financial instruments

Financial assets and liabilities are offset when there is a legally enforceable right to offset the recognized amounts and there is an intention to settle amounts on a net basis, or realize the asset and settle the liability simultaneously.

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

G. Financial Derivative and Hedge accounting

Derivatives are recognized at fair value at the date of the derivative contract, and are subsequently revalued at fair value. Fair values are obtained from quoted market prices in active markets, or according to the recent market deals, or the revaluation methods such as the Discounted Cashflow module and the Options pricing module, as appropriate. Derivatives are carried as financial assets when its fair value is positive and as financial liabilities when its fair value is negative.

The financial derivatives embedded into other financial instruments such as convertible bonds must be treated as if they are separate derivatives when the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host contract, and the hybrid (combined) instrument is not measured at fair value with changes in fair value recognized in profit or loss. The embedded derivatives are measured at fair value through profit or loss and changes in fair value are recognized in net trading income in the income statement.

The embedded derivatives are not separated if the Bank has chosen to classify the entire complex contract at fair value through profit or loss.

Recognition in profit or loss method that is arising from changes in the fair value of derivatives depends on whether the derivative is designated as a hedging instrument, and the nature of the item being hedged.

The parent bank designates certain derivatives as:

- Hedging instruments of the risks associated with fair value changes of recognized assets or liabilities or firm commitments (fair value hedge).
- Hedging of risks relating to future cash flows attributable to a recognized asset or liability or a highly probable forecast transaction (cash flow hedge).

Hedge accounting is used for derivatives designated in a hedging relationship when the following criteria are met. At the inception of the hedging relationship, the bank documents the relationship between the hedging instrument and the hedged item, along with its risk management objectives and its strategy for undertaking various hedge transactions provided that at the inception of the hedge and on an ongoing basis, the bank documents whether the hedging instrument is highly effective in offsetting changes in fair values or cash flows of the hedged item attributable to the hedged risk.

G/1 Fair value hedge

Changes in the fair value of derivatives that are designated and qualify as fair value hedges are recognized immediately in profit or loss, together with any changes in the fair value of the hedged asset or liability that are attributable to the hedged risk. The effective portion of changes in the fair value of the interest rate swaps and the changes in the fair value of the hedged item attributable to the hedged risk are recognized in profit or loss. Additionally, interest differential on interest rate swaps is recognized in profit or loss as part of "Net interest income" line item in the income statement. Any ineffectiveness is recognized in profit or loss in "Net trading income".

When the hedging instrument no longer qualifies for hedge accounting, the adjustment to the carrying amount of a hedged item is measured at amortized cost by recognition to profit and loss during that period till the maturity date. Adjustment to the carrying amount of a hedged equity instrument that has been deferred in equity remains in equity until the asset is derecognized.

G/2 Cash flow hedge

The effective portion of changes in the fair value of derivatives designated and qualified for cash flow hedge is recognized in equity while changes in fair value relating to the ineffective portion is recognized immediately in the income statement in "Net trading income".

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

Amounts accumulated in equity are transferred to income statement in the relevant periods when the hedged item affects the income statement. The effective portion of changes in fair value of interest rate swaps and options are reported in "Net trading income".

When a hedging item expires or is sold or if hedging instrument no longer qualifies for hedge accounting requirements, gains or losses that have been previously accumulated in equity remain in equity and are only recognized in profit or loss when the forecast transaction ultimately occurs. If the forecast transaction is no longer expected to occur, any related cumulative gain or loss on the hedging instrument that has been recognized in equity shall be reclassified immediately through profit or loss

G/3 Derivatives that do not qualify for hedge accounting

Changes in the fair value of any derivative instrument that does not qualify for hedge accounting are recognized immediately in the profit and loss under "net trading income". However, gains and losses arising from changes in the fair value of derivatives that are managed in conjunction with financial assets or liabilities are included in "net income from financial instruments at fair value through profit or loss".

Interest income and expense on all interest-bearing financial instruments are recognized in "Interest income" and "Interest expense" line items in the income statement using the effective interest rate method, except for those classified as held for trading or initially classified as fair value through profit or loss.

The effective interest rate is a method of calculating the amortized cost of a financial asset or a financial liability and allocating its interest income or interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments or cash receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the net carrying amount of the financial asset or financial liability on initial recognition. When calculating the effective interest rate, the bank estimates the future cash flows, considering all contractual terms of the financial instrument (for example, prepayment options) but does not consider future credit losses. The calculation includes all fees and commissions paid or received between parties of the contract which is considered an integral part of the effective interest rate, in addition to transaction costs and all other premiums or discounts.

Once a financial asset or a group of similar financial assets have been classified as nonperforming or impaired, the related interest income is not recognized and is recorded in marginal records apart from the financial statements, and is recognized as revenues according to cash basis as follows:

- When they are collected, after receiving all past due instalments for consumption loans, mortgage loans, and small business loans.
- For corporate loans, interest income is recognized on a cash-basis after the bank collects 25% of the rescheduled installments and provided these installments continue to be paid for at least one period. If a loan continues to be performing thereafter, interest accrued on the principal then outstanding starts to be recognized as revenues. Interest that is marginalized prior to the date when the loan becomes performing is not recognized in profit or loss except after paying all the loan balance in the balance sheet before rescheduling.

H. Interest income and expense:

Interest income and expense on all interest-bearing financial instruments are recognized in "Interest income" and "Interest expense" line items in the income statement using the effective interest rate method, except for those classified as held for trading or initially classified as fair value through profit or loss.

The effective interest rate is a method of calculating the amortized cost of a financial asset or a financial liability and allocating its interest income or interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash payments or cash receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the net carrying amount of the financial asset or financial liability on initial recognition. When calculating the effective interest rate, the bank estimates the future cash flows, considering all contractual terms of the financial instrument (for example, prepayment options) but does not consider future credit losses. The calculation includes all fees and commissions paid or received between parties of the contract which is considered

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

an integral part of the effective interest rate, in addition to transaction costs and all other premiums or discounts.

Once a financial asset or a group of similar financial assets have been classified as nonperforming or impaired, the related interest income is not recognized and is recorded in marginal records apart from the financial statements, and is recognized as revenues according to cash basis as follows:

- When they are collected, after receiving all past due instalments for consumption loans, mortgage loans, and small business loans.
- For corporate loans, interest income is recognized on a cash-basis after the bank collects 25% of the rescheduled installments and provided these installments continue to be paid for at least one period. If a loan continues to be performing thereafter, interest accrued on the principal then outstanding starts to be recognized as revenues. Interest that is marginalized prior to the date when the loan becomes performing is not recognized in profit or loss except after paying all the loan balance in the balance sheet before rescheduling.

I. Fees and commission income

Fees charged for servicing a loan or facility that is measured at amortized cost, are recognized as revenue since the service is provided. Fees and commissions on non-performing, impaired loans and receivables cease to be recognized as income and are rather recorded off-balance sheet. These are recognized as revenue - on a cash basis - only when interest income on those loans is recognized in profit or loss, at which time, fees and commissions that are an integral part of the effective interest rate of a financial asset are treated as an adjustment to the effective interest rate of that financial asset.

Commitment fees received by the bank to originate a loan are deferred if it is probable to be draw down and are regarded as a compensation for an ongoing involvement with the acquisition of the financial instrument and recognized as an adjustment to the effective interest rate of the loan

And in case of the commitment period has expired without issuing the loan, fees and commission are considered as income at the end of the commitment period,

Fees related to debt instruments is measured by fair value and recognized as profit, Loan syndication fees are recognized as revenue when the syndication has been completed and the bank has retained no part of the loan package for itself or has retained a part at the same effective interest rate as the other participants.

Commission and fees arising from negotiating, or participating in the negotiation of, a transaction for a third party – such as the arrangement of the acquisition of shares or other securities or the purchase or sale of businesses – are recognized on completion of the underlying transaction. Portfolio and other management advisory and service fees are recognized based on the applicable service contracts, usually on a time-apportionate basis. Asset management fees related to investment funds are recognized ratably over the Period in which the service is provided. Fees from financial planning management and custodian services provided to clients over long periods are usually recognized as revenue on a straight-line basis over the period in which these services are rendered.

J. Dividends income

Dividends are recognized in the income statement when the bank's right to receive payment is established.

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

K. Treasury Bills, Purchase and resale agreements, and sale and repurchase agreements

Treasury bills are recognized when they are bought at face value and the issuance cost which represents the unearned interest on these bills and government bonds is recognized through credit balances and other liabilities. And these treasury bills appear on the financial statement excluding the unearned interest and they are measured by the amortized cost using the effective interest rate.

Treasury bills purchased with resale agreement are presented in assets and treasury bills sold with repurchase agreement are presented in liabilities.

L. Impairment of financial assets

The Bank reviews all its financial assets except for financial assets that are measured at fair value through profit or loss to assess the extent of impairment as described below.

Financial assets are classified as three stages at each reporting date:

Stage 1: Financial assets that have not experienced a significant increase in credit risk since the date of initial recognition, and the expected credit loss is calculated for 12 months.

Stage 2: Financial assets that have experienced a significant increase in credit risk since the initial recognition or the date on which the investments are made, and the expected credit loss is calculated over the life of the asset.

Stage 3: Impairment of financial assets whose expected credit loss is to be recognized over the life of the asset on the basis of the difference between the carrying amount of the instrument and the present value of expected future cash flows.

Credit losses and impairment losses on the value of financial instruments are measured as follows:

- The low risk financial instrument is classified at initial recognition in the first stage and credit risk is monitored continuously by the Bank's credit risk management.
- If it is determined that there has been a significant increase in credit risk since the initial recognition, the financial instrument is transferred to the second stage where it is not yet considered impaired at this stage.
- In case of indicators of impairment of the financial instrument, it is transferred to the third stage
- The financial assets created or acquired by the Bank which include a higher credit risk ratio than the Bank's low risk financial assets are classified on initial recognition to the second stage directly and therefore the expected credit losses are measured on the basis of expected credit losses over the life of the asset.

L 1 Significant increase in credit risk

The Bank considers that the financial instrument has experienced a significant increase in the credit risk when one or more of the following quantitative and qualitative criteria, as well as the factors relating to default are met.

L 2 Quantitative factors

When the probability of default over the remaining life of the instrument is increased from the date of the financial position compared to the probability of default over the remaining life expected at initial recognition in accordance with the Bank's acceptable risk structure.

L 3 Qualitative factors

Retail loans, micro and small businesses

If the borrower encounters one or more of the following events:

- The borrower submits a request to convert short-term to long-term payments due to negative effects on the borrower's cash flows.
- Extension of the deadline for repayment at the borrower's request.

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

- Frequent past dues over the previous 12 months.
- Future adverse economic changes affecting the borrower's future cash flows.

Corporate loans and medium businesses

If the borrower has a follow-up list and / or financial instrument faced one or more of the following events:

- A significant increase in the rate of return on the financial asset as a result of increased credit risk.
- Significant negative changes in the activity and physical or economic conditions in which the borrower operates.
- Scheduling request as a result of difficulties facing the borrower.
- Significant negative changes in actual or expected operating results or cash flows.
- Future economic changes affecting the borrower's future cash flows.
- Early indicators of cash flow / liquidity problems such as delays in servicing creditors / business loans.
- Cancellation of a direct facility by the bank due to the high credit risk of the borrower.

Unpayments

In reference to IFRS 9 mentioned before the loans and facilities of institutions, medium, small, micro and retail banking are included in stage two if the period of non-payment is more than (60) days and less than (90) days. Noting that this period (60 days) will be reduced by (10) days per period to become (30) days during (3) period from the date of application.

Transfer between three stages:

Transfer from second stage to first stage:

The financial asset shall not be transferred from the second stage to the first stage unless all the quantitative and qualitative elements of the first stage are met and the full arrears of the financial asset and the proceeds are paid.

Transfer from third stage to second stage:

The financial asset shall not be transferred from the third stage to the second stage until all the following conditions are met:

- Completion of all quantitative and qualitative elements of the second stage.
- Repayment of 25% of the balance of the outstanding financial assets, including accrued segregated / statistical interest.
- Regularity of payment for at least 12 months.

M. Intangible Assets

Intangible assets, other than goodwill, are recognized at cost of acquisition and amortized on a straight-line basis or on the basis of economic benefits expected from them over the estimated useful lives. For assets that do not have a specific useful life, they are not amortized, but impairment is measured annually and the impairment value (if any) is recognized in the statement of income.

Assets type

Integrated computer systems
Computer systems
Other assets

Useful life-

10 years
3 years
3 to 5 years

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

M/I Computer software

Computers' software related development and maintenance expenses are recognized in the income statement when incurred. While specific direct costs of computer programs under the bank's control are recognized as intangible assets when probable economic benefit is expected to be generated for more than one period. Direct costs include program development staff costs, and appropriate allocation of the overhead costs.

Development costs are recognized as computer program in which lead to an increase or expansion in the performance of computer programs and are added to the original costs of the program.

These costs are amortized on the basis of the expected useful lives, and not more than three periods.

N. Fixed Assets

Land and buildings comprise mainly branches and offices. All property, plant and equipment are stated at historical cost less depreciation & impairment losses. Historical cost includes expenditure that is directly attributable to the acquisition of the items.

Subsequent costs are included in the asset's carrying amount or are recognized as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the bank and the cost of the item can be measured reliably. All other repairs and maintenance are charged to other operating expenses during the financial period in which they are incurred.

Land is not depreciated. Depreciation of other assets is calculated using the straight line method to allocate their cost to reach their residual values over their estimated useful lives, as follows:

The residual value and useful lives of fixed assets are reviewed at each balance sheet date and adjusted as necessary.

<u>Assets type</u>	<u>Useful life</u>
Building	40 years
Furniture	5 years
Equipment	7 years
Means of transportation	5 years
Computers	5 years
Installations	10 years or rent years which ever is less
Safes boxes & Secured rooms	40 years

The bank reviews the carrying amounts of its depreciable property and equipment whenever changes in circumstances or events indicate that the carrying amounts of those assets may not be recovered. When the carrying amount of an asset exceeds its recoverable amount, the carrying amount is reduced to its recoverable amount.

The recoverable amount of an asset is the higher of the asset's net realizable value or value in use. Gains or losses on disposals are determined by comparing proceeds with relevant carrying amount. These are included in profit (loss) in other operating income (expense) in the income statement.

O. Investment Properties

Investments properties are represented in lands and buildings owned by the bank for obtaining lease income or capital increase, consequently it does not include property assets through which the bank executes its operations, or those properties which reverted to the bank in the settlements of debts, investments properties are accounted for similarly with the same accounting method for the fixed assets.

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

Impairment of non-financial assets

Assets that do not have definite useful lives - except for goodwill - are not amortized, and are tested annually for impairment. Assets that are subject to amortization are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable.

An impairment loss is recognized for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less costs to sell and value in use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units). Non-financial assets that suffered impairment are reviewed for possible reversal of the impairment at each reporting date.

P. Lease

Finance lease are accounted for according to Law No. 95 of 1995 under the following conditions; if the contract gives the right to the lessee to purchase the asset on a specified period with a specified amount, if the contract's period represents atleast 75% of the expected useful life of the asset, or if the present value of total lease payments represents at least 90% of the asset's value. Otherwise lease contracts are classified as operating leases.

P/1 The bank as a Lessee

Finance lease contracts are recognized at the lease cost - including the cost of maintenance of the leased assets - within the expenses in the income statement for the period in which they occurred. If the bank decided to exercise the right to purchase the leased assets, the cost of the right to purchase it as an asset is capitalized and amortized over the useful life of the expected remaining life of the asset in the same manner as similar assets.

Lease expenses are recognized in the income statement using straight line method over the term of contract, after deduction of any discounts obtained by the bank at initiation of the contract. In case of periods when the bank is exempted from paying the lease or if the lease is variable (more or less) in different periods, in this case the distribution of the total lease payments expected to be paid over the contract life is recognized in income statement in equal amounts per month including the periods that the bank does not pay the lease.

P/2 The bank as a Lessor

For assets leased Operationally, asset are recorded in the fixed assets in the financial statement and amortized over the expected useful life of this asset in the same manner as similar assets. Leasing income recorded less any discount given to the lessee on a straight line method over the contract period.

Q. Cash and cash equivalents

For the purpose of the cash flow statement, cash and cash equivalents comprise balances with less than three months' maturity from the date of acquisition, including cash and balances due from Central Banks other than the mandatory reserve, due from banks, and treasury bills

R. Other provisions

Provisions for restructuring costs and legal claims are recognized when: The bank has a present legal or constructive obligation as a result of past events; and it is more likely that an outflow of resources will be required to settle the obligation; and the amount can be reliably estimated.

When there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole. A provision is recognized even if there is slight probability of an outflow of cash for an item within that group.

Reversals of provisions no longer required are presented in other operating income (expense).

The present value of the estimated payments to be made for payment of the obligations specified for payment is measured one period after the balance sheet date using an appropriate rate for the payment

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

of the obligation - without being affected by the applicable tax rate - which reflects the time value of the money and if the term is less than one period, the estimated value of the obligation is calculated unless the impact of which is substantial then it's calculated at present value.

Financial guarantees contracts

The financial guarantees contracts are contracts that the bank issue as a guarantee for bank's customers for their loans with other parties, and it is required that the bank pays some claims for the beneficiary as a result of default in repayments. These financial guarantees are presented to banks and other financial institutions instead of the bank's customers.

These contracts are initially recognized at fair value on the contract date, and bank's liability is measured by the higher of the initial recognition value deducted by the calculated amortization of guarantee fees or the best estimated value payments required to settle any financial liability resulted from the financial guarantee on balance sheet date. And these estimated values are determined based on bank's management experience in similar transactions and any differences in bank's liabilities will be recorded in income statement in other operating income (expenses).

S. Income tax

The income tax on the bank's period profits or losses including both current tax, and deferred income tax is recognized in the income statement, except when it relates to items directly recognized into equity, in which case the tax is also recognized directly in equity. Income tax is calculated on the taxable profits using the prevailing tax rates as of balance sheet in addition to tax adjustments for previous Period.

Deferred income tax is provided on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the financial statements. Deferred tax is determined based on the method used to realize or settle the current values of these assets and liabilities, using the tax rates prevailing as of the balance sheet date.

Deferred tax assets are recognized when there is a reasonable probability that future taxable profits will be realized through which the asset can be utilized. Deferred tax assets are reduced by the portion that will not be realized for the expected tax benefit over the following periods. However, if the expected tax benefit increases, deferred tax assets will be increased to the extent of previous reduction

T. Employee benefits

T/1 Pension obligations

The bank has a special social fund scheme (the Fund) that is not subject to the general law (law 79 for 1975) as it was established under law 64 for 1980 and this Fund has its own alternative independent articles of insurable rights (Pension / Bonuses / one payment compensation) and according to the ministry decree 94 for 1985. This fund covers only the bank employees in the Head Quarter and branches in the Arab Republic of Egypt.

The bank is committed to pay the Fund its monthly contributions, which calculated according the Fund's articles of associations and its amendments. The Fund is generally funded through monthly contributions payments and other resources as identified in the Fund's article of associations.

The fund's liabilities are the present values of the defined benefit obligations at the balance sheet date minus the current value of plan assets, together with adjustments for actuarial gains/losses and past service cost. The defined benefit obligation is calculated annually by independent actuaries using the projected unit credit method. The present value of the defined benefit obligation is determined by the estimated future cash outflows using interest rates of government securities, which have terms to maturity approximating the terms of the related liability.

The most basic assumptions used by the actuary are as follows: -

- Rates of death from the British Table A49-52ULT

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

- Deficit rates of Egyptian social insurance experience
- Average rates of salaries increases during the period for Egyptian pound & American dollar.
- Method used is the estimated additional unit in the calculation of the commitments and the present value of subscriptions (Unit Projected Method).

T/2 Bonuses scheme

A liability for employees and managers' benefits in the form of bonus is recognized in other credit balances and other liabilities according to the bank board of directors' decisions in this respect and the payments should be determined before the time of issuing the financial statements.

T/3 Employees share in profits

The bank distributes a portion of the expected profits determined by the board under the bank's statute, to the bank's personnel. In the case that no employees profit share were distributed no liability is recognized.

T/4 Board of directors members profit sharing

The bank pays a percentage of its cash dividends as profit share to its Board of directors' members. Board of directors' profit sharing is recognized as a dividend distribution through equity and as a liability when approved by the bank's shareholders. No liability is recognized for profit sharing related to undistributed profits.

U. Capital

U/1- Cost of capital

Issue charges are presented, which is directly related to the issuance of new shares or shares for the acquisition of an entity or the issuance of options against owners' equity with the net proceeds after taxes.

U/2- Dividends

Dividends are deducted from equity in the period which the general assembly of the shareholders acknowledges these distributions. These distributions include the share of workers in the profits and remuneration of the board of directors as per regulation and law.

3. Financial Risk management

The bank is exposed to a variety of financial risks. Acceptance of risk is the basis of financial activity. Some risks or combination of risks are analyzed, evaluated and managed together. Therefore, the bank aims to achieve an appropriate balance between risk and return and minimize potential adverse effects on the bank's financial performance., The most important types of risk are credit risk, market risk, liquidity risk and other operational risks. Market risk includes foreign exchange risk, interest rate risk and other price risks.

The bank's risk management policies are designed to identify and analyze these risks, to set appropriate risk limits and controls, and to monitor the risks and adherence to limits by means of reliable and up to date information system. The bank regularly reviews its risk management policies and systems to reflect changes in markets, products, and best emerging applications.

Risk management is carried out by a risk department under policies approved by the Board of Directors. Credit risk management identifies, evaluates and covers financial risks in close collaboration with the various operational units of the bank. The board provides written principles for risk management as a whole, as well as written policies covering specific risk areas such as credit risk, foreign currency risk,

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

interest rate risk, and derivative and non-derivative instruments. In addition, credit risk management is responsible for periodic review of risk management and the control environment independently.

3.A. Credit risk

The bank is exposed to credit risk, which is the risk that a party will fail to fulfill its contractual obligations. The credit risk is the most important risk to the bank, and thus management carefully manages exposure to that risk. Credit risk is mainly presented due to lending activities through loans, facilities, and investment activities that results in including debt instruments in the bank's assets. Credit risk is also found in off-balance sheet financial instruments such as loan commitments. The credit risk management and control operations of the Credit Risk Management Group are concentrated in the Credit and Risk Management Department, which reports to the Board of Directors, senior management, and heads of activity units on a regular basis.

3.A.1 : Credit risk measurement

3.A.1.1 Loans and advances to banks and customers

In measuring credit risk of loans and advances to banks and customers, the bank reflects the following component:

- Probability of default – by the client or counterparty on its contractual obligations.
- The bank assesses the probability of default of individual customers using internal rating tools tailored to the various categories of the counterparty. They have been developed internally and combine statistical analysis with credit officer judgment. Clients of The bank are segmented into four rating classes. The rating scale which is as shown below reflects the range of default probabilities- defined for each rating class. This means that in principal, exposures might migrate between classes as the assessment of their probability of default changes. The rating tools are kept under review and upgraded as necessary. The bank regularly assesses the performance of the rating and its predictive power with regard to default cases.

Bank's internal ratings scale and mapping of external ratings

<u>Bank's rating</u>	<u>Description of the grade</u>
1-5	Performing loans
6	Regular watching
7	Watch list
8-10	Nonperforming loans

Exposure at default is based on the amounts the bank expects to be outstanding at the time of default. For example, for a loan this is the face value. For a commitment, the bank includes any amount already drawn plus the further amount that may have been drawn by the time of default, if it occurred.

Loss given default or loss severity represents the bank's expectation of the extent of loss on a claim should default occur. It is expressed as a percentage of loss per unit of exposure and typically varies by type of counterparty, type and seniority of claim and availability of collateral or other credit mitigation methods.

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

3.A.1.2 Debt securities and treasury bills

For debt securities and treasury bills external rating such as (Standard & Poor's) rating or their equivalents are used by the bank for managing of the credit risk exposures. In case such ratings are unavailable, internal rating methods are used that are similar to those used for credit customers. The investment in those securities and bills are viewed as a way to gain a better credit quality mapping and maintain a readily available source to meet the funding requirements at the same time.

3.A.2: Risk limit control and mitigation policies

The bank manages, limits, and controls concentrations of credit risk wherever they are identified – in particular - to individual counterparties, groups and to industries and countries.

The bank structures the levels of credit risk it undertakes by placing limits on the amount of risk accepted in relation to one borrower, or group of borrowers, and to geographical and industry segments. Such risks are monitored on a revolving basis and subject to an annual or more frequent review, when considered necessary. Limits on the level of credit risk by product, industry sector, and by country are approved quarterly by the Board of Directors.

The exposure to any one borrower including banks is further divided by sub-limits covering on- and off-balance sheet exposures, and daily risk limits in relation to trading items such as forward foreign exchange contracts. Actual exposures against limits are monitored daily.

Exposure to credit risk is also managed through regular analysis of the ability of the borrowers and potential borrowers to meet interest and capital repayment obligation and by changing these lending limits when appropriate.

Some other specific control and mitigation measures are outlined below:

3.A.2.1 : Collateral

The bank employs a range of policies and practices to mitigate credit risk. The most traditional of these is maintaining collaterals against funds advances, which is common practice. The bank implements guidelines on the acceptability of specific classes of collateral or credit risk mitigation. The principal collateral types for loans and advances are:

- Mortgages over residential properties.
- Pledge on business assets like machinery and merchandise.
- Pledge in financial instruments like debt instruments and equity.

Longer-term finance and lending to corporate entities are generally secured; revolving individual credit facilities are generally unsecured. The Bank attempts to mitigate the credit risk through additional collaterals from the concerned parties immediately on arising of impairment indicators for any of the loans or facilities.

Collateral held as security for financial assets other than loans and advances depends on the nature of the instrument. Debt securities, treasury and other eligible bills are generally unsecured, with the exception of Asset-backed Securities and similar instruments, which are secured by portfolios of financial instruments.

3.A.2.2 : Derivatives

The bank maintains strict control limits on net open derivative positions (i.e., the difference between purchase and sale contracts) by both amount and term. The amount subject to credit risk is limited to expect future net cash inflows of instruments, which in relation to derivatives are only a fraction of the contract, or notional values used to express the volume of instruments outstanding. This credit risk exposure is managed as part of the overall lending limits with customers, together with potential exposures from market movements. Collateral or other security is not usually obtained for credit risk exposures on these instruments, except where the bank requires margin deposits from counterparties. Settlement risk arises in any situation where a payment in cash, securities or equities is made in the expectation of a corresponding receipt in cash, securities or equities. Daily settlement limits are

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

established for each counter party to cover the aggregate of all settlement risk arising from the bank market's transactions on any single day.

3.A.2.3 : Master Netting Arrangements

The bank further restricts its exposure to credit losses by entering into master netting arrangements with counterparties with which it undertakes a significant volume of transactions. Master netting arrangements do not generally result in an offset of assets and liabilities shown in the balance sheet, as transactions are either usually settled on a gross basis. However, the credit risk associated with favourable contracts is reduced by a master netting arrangement to the extent that if a default occurs, all amounts with the counterparty are terminated and settled on a net basis. The bank's overall exposure to credit risk on derivative instruments subject to master netting arrangements can change substantially within a short period, as it is affected by each transaction subject to the arrangement.

3.A.2.4 : Credit Related Commitments

The primary purpose of these instruments is to ensure that funds are available to a customer as required. Guarantees and standby letters of credit carry the same credit risk as loans. Documentary and commercial letters of credit – which are written undertakings by the bank on behalf of a customer authorizing a third party to draw drafts on the bank up to a stipulated amount under specific terms and conditions – are collateralized by the underlying shipments of goods to which they relate and therefore carry less risk than a direct loan.

Commitments to extend credit represent unused portions of authorizations to extend credit in the form of loans, guarantees or letters of credit. With respect to credit risk on commitments to extend credit, the bank is potentially exposed to loss in an amount equal to the total unused commitments. However, the likely amount of loss is less than the total unused commitments, as most commitments to extend credit are contingent upon customers maintaining specific credit standards.

The bank monitors the term to maturity of credit commitments because longer-term commitments generally have a greater degree of credit risk than shorter-term commitments.

3.A.3: Impairment and provisioning policies

The internal assessment systems mentioned above assessment (3.A.1) focus to a large extent on credit quality planning from the beginning of the validation of lending and investment activities. Otherwise, only impairment losses recognized on the balance sheet date for financial reporting purposes are recognized on the basis of objective evidence of impairment as described in this note. Due to the different methods applied, credit losses charged to the financial statements are usually less than the estimated loss using the expected loss model. The provision for impairment losses in the balance sheet at the end of the Period is derived from the four internal ratings.

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

The table below shows the percentage of the bank's on balance sheet items, relating to loans and advances and the associated impairment allowance for each of the bank internal rating categories:

Bank's rating	30 June 2024		31 December 2023	
	Loans and advances	Impairment Losses	Loans and advances	Impairment Losses
	%	%	%	%
1-Performing loans	69	15	70	16
2-Regular watching	23	30	23	26
3-Watch list	-	-	-	-
4-Nonperforming loans	8	55	7	58
	100	100	100	100

The internal rating tool assists management to determine whether objective evidence of impairment exists under EAS 26, based on the following criteria set out by the bank:

- Significant financial difficulties facing the counterparty;
- Breach of loan covenants as in case of default;
- Expecting the bankruptcy of the counterparty, liquidation, lawsuit, or finance rescheduling.
- Deterioration of the borrower's competitive position.
- Offering exceptions or surrenders due to economic and legal reasons related to financial difficulties encountered by the counterparty not provided by the bank in ordinary conditions.
- Deterioration in the value of collateral.
- Deterioration in credit situation.

The bank policies require the review of individual financial assets that are above materiality threshold at least annually or more regularly when individual circumstances require. Impairment allowance on individually assessed accounts are determined by an evaluation of the incurred loss at balance sheet on case-by-case basis, and are applied to all individually significant accounts. The assessment normally encompasses collateral hold including re-confirmation of its enforceability and the anticipated receipts for that individual account.

Collectively assessed impairment allowances are provided for portfolios of homogenous assets using the available historical experience, experience judgment and statistical techniques

3.A.4 General Bank Risk Measurement Model

In addition to the four credit rating levels (note 3.A.1), management classifies categories that are more detailed so as to agree with the requirements of the Central Bank of Egypt (CBE). Assets subject to credit risk are classified in these categories in accordance with regulations and detailed conditions that largely depend on information related to the client, his/her activity, financial position, and regularity of repayment.

The bank calculates the required provisions for the impairment of the assets subject to credit risk, including commitments related to credit, on the basis of ratios specified by the Central Bank of Egypt. In case the impairment loss provision required by the Central Bank of Egypt exceeds that required for the purpose of financial statement preparation in accordance with the Egyptian accounting standards, retained earnings are decreased to support the General Bank risk reserve with the amount of the increase. This reserve is periodically revised for an increase or a decrease to reflect the amount of increase between the two provisions.

3.A.5 Maximum credit risk limit before collaterals

	30 June 2024	31 December 2023
Loans and advances to banks	306,234	205,531
Loans and advances to customers		
Retail:		
*Overdrafts	175,663	70,822
*Credit cards	22,521	30,042
*Personal loans	172,737	263,567
*Mortgage Loan	57,931	89,451
*Other Loans	933	1,584
*Commercial papers	128,673	147,905
deduct : expected credit loss	(23,260)	(32,672)
Corporate:		
*Overdrafts	1,424,666	1,931,893
*Direct loans	757,277	826,980
*Syndicated loans	1,266,722	1,589,751
*Discounted commercial papers	705	36,352
*Other Loans	996	1,459
deduct : expected credit loss	(343,631)	(357,442)
deduct : unearned discounted commercial paper and unearned interest	(30,314)	(30,707)
Financial investments:		
Financial investments through O.C.I.	2,194,206	3,106,002
Financial investments at amortized cost	2,179,859	2,278,749
Other assets	172,864	114,102
Total	8,464,782	10,273,369
Off balance sheet credit risk exposure is shown below:	30 June 2024	31 December 2023
Letters of guarantee	930,268	929,568
Letter of credit (import and export)	361,610	271,108
Customers Acceptances	80,773	86,449
Total	1,372,651	1,287,125

The above table represents maximum credit risk exposure to the bank at the end of 30 June 2024 :

As shown above, 39.83% of the total maximum exposure is derived from loans and advances to banks and customers against 41.3% for comparative year, while the investments in debt instruments represents 44.46% against 46.58% for the comparative year.

Management is confident in its ability to continue to control and sustain minimal exposure of credit risk to the bank resulting from both its loans and advances portfolio and debt Instruments base on the following:

- 92% of the loans and advances portfolio is categorized in the top two grades of the internal rating system.
- 80.75% of the loans and advances portfolio are considered to be neither past due nor impaired.
- Loans and advances assessed on an individual third stage amounted to USD 289,342 thousand at the end of the period with an ECL expense representing 74.82% from it's value against USD 369,005 at the end of the comparative period with an ECL expense representing 72.75% of it's value.
- The bank has implemented more prudent processes when granting loans and advances during the financial period ended in 30 June 2024.
- More than 89.18% of the investments in debt instruments & treasury bills are represented in debt instruments on the Egyptian government.

31 December 2023						
Individually impaired loans	-	371,714	34,172	-	-	405,886

Loans and advances restructure

Restructuring activities include extended payment arrangements, approved external management plans, modification and deferral of payments. Restructuring policies and practices are based on indicators or criteria that, in the judgment of local management, indicate that payment will most likely continue. These policies are kept under continuous review. Restructuring is most commonly applied to long term loans – in particular, customer finance loan. Total renegotiated loans results amounted to USD 54,568 thousand at the end of 30 June 2024 (was USD 83,527 thousand at 31 December 2023).

(All amounts are in thousand US Dollars unless otherwise mentioned)

B. Market risk

B.1 Value exposed to risk

B.1.1 Interest rate fluctuation risk

Interest rate risk is controlled by asset and liability committee (ALCO)

Financial assets in foreign currency

The interest rate is determined on the basis of (floating rate) therefore interest rate fluctuation is mitigated on foreign currency increasing or decreasing taking into consideration hedging price fluctuation risk resorting to financial derivatives Interest Rate Swap (IRS).

Financial assets in local currency

Fixed income financial assets:

The risk of fixed income assets is covered by issuing medium and long term (liability products) to meet fixed rate income risk.

Floating rate financial assets

Variable cost is risk free due to its compatibility with the prices prevailing at the grant.

B.1.2 Foreign exchange fluctuation risk

Foreign currency position is monitored momentary by the responsible department to preserve the allowed limits with currency position, whether by the Central Bank of Egypt or bank board of directors. The bank does not open position on foreign currency except on clients' requirement.

B.2 Foreign exchange risk

The bank takes on exposure to the effects of fluctuations in the prevailing foreign currency exchange rates on its financial position and cash flows. The board sets limits on the level of exposure by level of currency and in aggregate for both overnight and intra-day positions which are monitored daily. The table below summarises the bank's exposure to foreign currency exchange rate risk at the end of the financial Period.

B.3 Interest rate risk

Cash flow interest rate risk is the risk that the future cash flows of a financial instrument will fluctuate because of changes in market interest rates. Fair value interest rate risk is the risk that the value of a financial instrument will fluctuate because of changes in market interest rates. The bank takes on exposure to the effects of fluctuations in the prevailing levels of market interest rates on both its fair value and cash flow risks. Interest margins may increase because of such changes but may reduce profits in the event that unexpected movements arise. The board sets limits on the level of mismatch of interest rate repricing and value at risk that may be undertaken, which is monitored daily by the respective bank's department.

The tables below summaries the bank's exposure to the interest rate fluctuations risk that include carrying value of the financial instruments categorized based on the repricing dates or the maturity date – whichever is earlier.

C. Liquidity risk

Liquidity risk is the risk that the bank is unable to meet its obligations associated with its financial liabilities when they fall due and to replace funds when they are withdrawn. The consequences may be the failure to meet the obligation to repay depositors and fulfil commitments to lend.

البنك العربي الافريقي الدولي
arab african international bank

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

Liquidity risk management process

The bank liquidity management process, as carried out within the bank and monitored by assets and liability committee, includes:

- Day-to-day funding, managed by monitoring future cash flows to ensure that requirements can be met. This includes replenishment of funds as they mature or borrowed by customers. The bank maintains an active presence in global money markets to ensure this to happen.
- Maintaining a portfolio of highly marketable assets that can easily be liquidated as protection against any unforeseen interruptions to cashflow.
- Monitoring the liquidity ratios against internal and regulatory requirements by the Central Bank of Egypt.
- Managing the concentration and profile of debt maturities.

Monitoring and reporting take the form of cash flow measurement and projections for the next day, week and month respectively, as these are key Periods for liquidity management. The starting point for those projections is an analysis of the contractual maturity of the financial liabilities and the expected collection date of the financial assets.

Assets and liability management also monitors unmatched medium-term assets, the level and type of undrawn lending commitments, the usage of overdraft facilities and the impact of contingent liabilities such as standby letters of credit and guarantees.

Funding approach

Sources of liquidity are regularly reviewed by a separate team in bank's treasury to maintain a wide diversification by currency, geography, provider, product and term.

Derivatives

Derivatives settled on a gross basis

The bank's derivatives that will be settled on a gross basis include: Foreign exchange derivatives: currency forward, currency swaps.

D. Fair value of financial assets and liabilities

D.1 Financial instruments measured at fair value using valuation techniques

No change in the assessed fair value using the valuation techniques through the financial period ended on 31 March 2024 comparing to 31 December 2023.

D.2 Financial instruments not measured at fair value

The table below summarizes the carrying amounts and fair values of those financial assets and liabilities not presented on the bank's statement of financial position at their fair value:

	Book Value		Fair Value	
	30 June 2024	31 December 2023	30 June 2024	31 December 2023
Financial Assets				
Due from banks	6,140,776	4,942,057	6,140,776	4,942,057

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

Due from banks

The fair value of due from banks represents the book value, where all balances are current balances expected to mature during the Year.

Investment securities

Investment securities disclosed in the table above comprise only those financial assets classified as held to maturity. Where assets available for sale are valued at fair value except for equity investments which the bank couldn't determine its fair value with an acceptable degree of certainty. And the fair value of financial assets held to maturity is determined based on market prices or broker/dealer price quotations. Where this information is not available, fair value is estimated using quoted market prices for securities with similar credit, maturity and yield characteristics.

Due to banks

The fair value of due to banks approximates the book value, where all balances are current balances expected to mature during the Year.

Deposits due to customers:

The customer deposits are divided into current and non-current balances. The book value of the current balances approximates the fair value.

Other loans:

The other loans are divided into current and no-current balances. The book value of the current balances approximates the fair value.

E. Capital management

The bank's objectives when managing capital, which is a broader concept than the 'equity' on the face of the statement of financial position, are:

- To comply with the capital requirements set by Arab Republic of Egypt and countries in which bank branches operate.
- To safeguard the bank's ability to continue as a going concern so that it can continue to provide returns for shareholders and benefits for other stakeholders.
- To maintain a strong capital base to support the development of its business.
- Capital adequacy and capital uses are reviewed in accordance with the requirements of the regulatory capital (the Central Bank of Egypt in the Arab Republic of Egypt) by the Bank's management, through models based on the Basel committee's guidelines. The required data are submitted and deposited with the Central Bank of Egypt on a quarterly basis

The CBE requires the bank to:

- The bank maintains a ratio of 12.5% or more of total regulatory capital to its risk-weighted assets and contingent liabilities. In addition to another 0.25% summing up to 12.75% for AAIB according to the CBE manual dated 8 May, 2017 since the bank is considered one of the banks with local systematic importance.
- Bank's branches operating outside Arab Republic of Egypt subject to banking supervision rules in countries which they operate.
- On December 18, 2012, the Central Bank of Egypt (CBE) approved the minimum capital adequacy guidelines as part of the implementation of the Basel II directives. Under these instructions, the Bank is required to comply with these instructions as of December 2012

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

According to the new regulations issued on 18 December 2012

Tier 1 capital:

Tier 1 capital consists of two parts **Going Concern Capital and Additional Going Concern.**

Tier 2 capital:

Going Concern Capital consists of:

- 45% of the increase in the fair value over the book value of financial investments (fair value reserve if it is positive, financial investments held to maturity, investments in subsidiaries and associates).
- 45% of the special reserve.
- 45% of the foreign currency reserve positive translation differences.
- Hybrid financial instruments.
- Loans (deposits) support.
- Provision for impairment losses for loans and advances and liabilities regular (must not exceed 1.25% of the total credit risk of the assets and liabilities of regular risk-weighted, must also be dedicated impairment losses for loans and credit facilities and contingent liabilities irregular enough to meet the liabilities component for which LCA).

Deducted 50% of the Tier 1 and 50% of the Tier 2:

- Investments in non-financial companies - each company alone, which amount to 15% or more of continuous core capital of the bank by regulatory amendments.
- The total value of the bank 's investments in non-financial companies - each individual company and that at least 15% of the basic capital continued by regulatory amendments provided that exceed those investments combined for 60% of the core capital continued by regulatory amendments
- Securitization portfolios.
- Regarding the value of the assets that devolved to the bank settlement of debts a general banking risks reserve.

When calculating the total extension of capital adequacy standard, shall not exceed loans (deposits) support for 50% of the first slide after the disposals.

Contingent assets and liabilities are weighted at credit risk, market risk and operational risk.

The capital adequacy criterion is composed of the following

- 1 - Credit risk
- 2 - Market risk
- 3 - Operational risk

The assets are weighted risk weights ranging from zero to 100% classified according to the nature of the debtor, each asset to reflect the credit risk associated with it, and taking cash collateral into account.

The treatment is used for extra-budgetary funds after making adjustments to reflect the episodic nature of the potential losses of those amounts.

Banks operating in the Arab Republic of Egypt are committed to maintain a capital base of at least 12.5% of its assets and incidental liabilities weighted with credit, market, and operational risks. Additionally, a capital requirement is mandatory for banks with local systematic importance. Accordingly, Arab African International Bank maintains an extra capital requirement of 0.25% summing up to 12.75% of its assets and probable liabilities weighed with market, credit, and operational risk as capital requirement.

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

The below tables summarize tier 1 and tier 2 components and capital adequacy ratio

	30 June 2024	31-December-2023
	USD '000	USD '000
Capital		
<u>Tier 1 Going Concern Capital (1)</u>		
Share capital (net of the treasury shares)	500,000	500,000
Reserves	243,404	220,660
Retained earnings	1,514,911	1,364,022
General risk reserve	23,481	23,481
Total other comprehensive income items after regulatory adjustments	(28,725)	(77,303)
Quarterly interim earnings	74,998	168,178
Total deduction from going concern capital	(91,512)	(92,839)
Total Common Equity capital	2,236,557	2,106,199
<u>Tier 2 (Gone – Concern Capital) (2)</u>		
45% of the value of the Special Reserve	1,102	1,102
45 % of the increase in the fair value above the carrying amount for investments in subsidiaries and associates	9,918	11,511
Provision for impairment losses for performing loans and advances and contingent liabilities	61,299	43,856
Total Deductions from tier 2	(1,735)	(2,698)
Total tier 2 (Gone – Concern Capital)	70,584	53,771
Total capital base	2,307,141	2,159,970
Total Credit Risk , Market Risk and Operational Risk		
Credit Risk	10,305,286	10,141,711
Market Risk	175,945	163,876
Operational Risk	231,901	274,717
Total Credit Risk , Market Risk and Operational Risk	10,713,132	10,580,304
Capital Adequacy Ratio %	21.54%	20.42%

- NSFR ratio amounted 158.04% (164.56 % in local currency & 153.99% in foreign currency) and the LCR amounted 411.46% (234.34% in local currency & 304.25% in foreign currency).

Financial Leverage Ratio

Central Bank of Egypt Board of Directors had approved in its meeting held on July 14, 2015 special supervisory instructions related to leverage ratio of maintaining a minimum level of leverage ratio of 3% to be reported on a quarterly basis as follows:

- As a guidance ratio starting from end of September 2015 till December 2017
- As an obligatory ratio starting from the period 2018

This ratio will be included in Basel requirement Tier 1 in order to maintain the effectiveness of the Egyptian banking system, as well as keep up with the best international regulatory practices.

Financial leverage ratio reflect the relationship between tier 1 for capital that are used in capital adequacy ratio (after exclusions) and the Bank's assets (on and off-balance Sheet items) that are not risk weighted assets

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

Ratio Components

The numerator components

The numerator consists of the tier 1 for capital that are used in capital adequacy ratio (after exclusions) in accordance with the requirements of the Central Bank of Egypt

The denominator components

The denominator consists of all bank's assets (on and off-balance sheet items) according to the financial statements, called "Bank Exposures" including the following totals:

1. On balance sheet exposure items after deducting Tier 1 exclusions for capital base
2. Derivatives contracts exposure
3. Financing financial securities operations exposure
4. Off-balance sheet exposures "weighted exchange transactions"

The Financial leverage ratio as follow:

	30 June 2024 USD '000	31-December-2023 USD '000
Tier 1 Capital after exclusion	2,236,557	2,106,199
Total Tier 1 Capital after exclusion	2,236,557	2,106,199
Total on balance sheet exposures items including derivatives contracts & financial securities	17,894,425	19,308,980
Total off-balance sheet exposures	1,247,173	1,207,913
Total exposures on and off-balance sheet	19,141,598	20,516,893
Financial leverage ratio	11.68%	10.27%

4. Critical accounting estimates and judgments

The bank makes estimates and assumptions that affect the presented amounts of assets and liabilities within the next financial Period. Estimates and judgments are evaluated on a continuous basis, and are based on past experience and other factors, including expectations with regard to future events which believed to be reasonable during the current conditions and available information.

4.A. Impairment losses on loans and advances

The bank reviews its loan portfolios to assess impairment at least on a quarterly basis. In determining whether an impairment loss should be recorded in the income statement, the bank makes judgments as to whether there is any observable data indicating an impairment trigger followed by measurable decrease in the estimated future cash flows from a portfolio of loans before the decrease can be identified with that portfolio. This evidence may include observable data indicating that there has been an adverse change in the payment status of borrowers in a group, or national or local economic conditions that correlate with defaults on assets in the bank. Management uses estimates based on historical loss experience for assets with credit risk characteristics and objective evidence of impairment similar to those in the portfolio when scheduling its future cash flows. The method and assumptions used to estimate the amount and the timing of future cash flows are reviewed on a regular basis in order to reduce any difference between the expected and the actual loss based on experience

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

4.B. Impairment of equity investments through other comprehensive income

The bank determines that available-for-sale equity investments are impaired when there has been a significant or prolonged decline in the fair value below its cost. This determination of whether they are significant or prolonged requires judgment. In making this judgment, the bank evaluates among other factors, the volatility in share price. In addition, objective evidence of impairment may be deterioration in the financial health of the investee, industry and sector performance, changes in technology, and operational and financing cash flows.

4.C. Fair value of Derivatives

The fair values of financial instruments where no active market exists or where quoted prices are not otherwise available are determined by using valuation techniques. In these cases, the fair values are estimated from observable data in respect of similar financial instruments or using models. Where market observable inputs are not available, they are estimated based on appropriate assumptions. Where valuation techniques (for example, models) are used to determine fair values, they are validated and Periodically reviewed by qualified personnel independent of those that sourced them. All models are certified before they are used, and models are calibrated to ensure that outputs reflect actual data and comparative market prices. To the extent practical, models use only observable data; however, areas such as credit risk (both own credit risk and counterparty risk), volatilities and correlations require management to make estimates. Changes in assumptions about these factors could affect the reported fair value of financial instruments.

4.D. Amortized cost investments

The bank classifies some non-derivative financial assets with fixed or determinable payments and fixed maturity as held to maturity. This classification requires significant judgment. In making this judgment, the bank evaluates its intention and ability to hold such investments to maturity. If the bank were to fail to keep these investments until maturity other than for the specific circumstances – for example, selling an insignificant amount close to maturity – the bank is required to reclassify the entire category as available for sale. Accordingly, the investments would be measured at fair value instead of amortized cost, in addition to suspending the classification of any investments in this category.

4.E. Income taxes

The bank is subject to income taxes in numerous jurisdictions. Significant estimates are required in determining the worldwide provision for income taxes. There are many transactions and calculations for which the ultimate tax determination is uncertain. The bank recognizes liabilities for anticipated tax audit issues based on estimates of whether additional taxes will be due. Where the final tax outcome of these matters is different from the amounts that were initially recorded, such differences will impact the income tax and deferred tax provisions in the Period where the differences exist.

5. Segment reporting analysis

5A. Segment reporting analysis

Segmental analysis of activities

Segment activity includes operating activities, assets used in providing banking services, and risk and return management associated with this activity, which might differ from other activities. Segment analysis for the banking operations involves the following:

Large, medium, and small enterprises:

Includes current accounts, deposits, overdraft accounts, loans, credit facilities, and financial derivatives activities.

Investment:

Includes mergers, purchase of investments and financing the restructuring of companies and financial instruments.

Retail:

includes current account, saving accounts, deposits, credit card, personal loans, and real estate loans

(An Egyptian Joint Stock Company)

Notes to the separate financial statements –For the Period ended 30 June 2024

(All amounts are in thousand US Dollars unless otherwise mentioned)

Other activities:

Includes other banking operations, such as money management.

Transactions among segments are performed according to the bank's normal operating cycle, and includes operating assets and liabilities as presented in the bank's statement of financial position.

(All amounts are in thousand US Dollars unless otherwise mentioned)

21. Financial Derivatives instruments and hedging.

Currency forwards represent commitments to purchase foreign and domestic currency, including undelivered spot transactions. Foreign currency and interest rate futures are contractual obligations to receive or pay a net amount based on changes in currency rates or interest rates, or to buy or sell foreign currency or a financial instrument on a future date at a specified price, established in an active financial market.

Credit risk is considered low, and future interest rate contract represents future exchange rate contracts negotiated for case by case, These contracts require financial settlements of any differences in contractual interest rates and prevailing market interest rates on future interest rates on future dates based on contractual amount (nominal value) pre agreed upon.

Forward rate agreements are individually negotiated interest rate futures that call for a cash settlement at a future date for the difference between a contracted rate of interest and the current market rate, based on a notional principal amount.

Currency and interest rate swaps are commitments to exchange one set of cash flows for another. Swaps result in an economic exchange of currencies or interest rates (for example, fixed rate for floating rate) or a combination of all these (i.e., cross-currency interest rate swaps). No exchange of principal takes place, except for certain currency swaps.

The bank's credit risk represents the potential cost to replace the swap contracts if counterparties fail to fulfill their obligation. This risk is monitored on an ongoing basis with reference to the current fair value, and a proportion of the notional amount of the contracts. In order to control the level of credit risk taken, the bank assesses counterparties using the same techniques as for its lending activities.

The notional amounts of certain types of financial instrument provide a basis for comparison with instruments recognized on the balance sheet but do not necessarily indicate the amounts of future cash flows involved or the current fair value of the instruments and, therefore; do not indicate the bank's exposure to credit or price risks.

The derivative instruments become favorable (assets) or unfavorable (liabilities) as a result of fluctuations in market interest rates or foreign exchange rates relative to their terms. The aggregate contractual or notional amount of derivative financial instruments on hand, the extent to which instruments are favorable or unfavorable, and thus the aggregate fair values of derivative financial assets and liabilities, can fluctuate significantly from time to time.

	<u>30 June 2024</u>		<u>31 December 2023</u>	
	Assets	Liabilities	Assets	Liabilities
